# CCT Performance Profile 7-26-2010

## Module Four: Assessment for Learning

*Teachers use multiple measures to analyze student performance and to inform subsequent planning and instruction by:*

The following two indicators are essential knowledge that is overarching to all indicators of this domain:

- Teachers should understand the different [purposes](#)<sup>1</sup> and [types of assessment](#)<sup>2</sup> that capture the complexity of student learning across the [hierarchy of cognitive skills](#)<sup>3</sup>;
- Recognize the role that lack of opportunity to learn, lack of effective instruction and assessment bias can play in the overrepresentation in special education of students with cultural, ethnic, gender and linguistic differences.

---

<sup>1</sup> **Assessment purposes** include but are not limited to screening, instructional planning, monitoring student progress, diagnostics, and program/curriculum evaluation.

<sup>2</sup> **Assessment types** may be created by the teacher or externally produced and include, but are not limited to, observation, functional behavior assessment, performance-based assessment of application of learning, or criterion referenced.

<sup>3</sup> **The hierarchy** of cognitive skills (Bloom's 1956 taxonomy of cognitive skills as revised by Anderson and Krathwohl, 2001) includes the following lower order to higher order thinking skills:

- **Remembering:** Retrieving, recognizing, and recalling relevant knowledge from long-term memory.
- **Understanding:** Constructing meaning from oral, written, and graphic messages through interpreting, exemplifying, classifying, summarizing, inferring, comparing, and explaining.
- **Applying:** Carrying out or using a procedure through executing or implementing.
- **Analyzing:** Breaking material into constituent parts, determining how the parts relate to one another and to an overall structure or purpose through differentiating, organizing, and attributing.
- **Evaluating:** Making judgments based on criteria and standards through checking and critiquing.
- **Creating:** Putting elements together to form a coherent or functional whole; reorganizing elements into a new pattern or structure through generating, planning, or producing.
